

Data Analytics:

It is the process of examining, cleaning, transforming raw data to discover meaningful insight for decision- making.

Tools:

In data analytics used tools like **Excel, Power BI, Python, SQL, Statistics & Machine Learning.**

Steps:

1. Data Collection:

Data collection means gathering data from different sources in a systematic way.

2. Data Inspection:

In this stage , check data types, identifying missing values, defect errors or inconsistencies.

3. Data Cleaning:

It is the process of removing errors and suitable for analysis. It includes handling missing errors , removing duplicates and correcting in accurate data. It is the main process of data analytics.

4.Data Transformation:

It involves converting data in to a suitable for analysis. This include normalization , scaling and encoding categorical variables.

5.Data Exploration:

Used to analyse the data and discover patterns, trends and relationships.

: 6. Data Visualization:

It includes present data graphical format such as charts and graphs. Its helps in simplifying complex data and make it easier to understand patterns and trends.

7.Data Presentation:

It is the final stage. This is done through reports, dashboards or presentation.
